

The spine

SECTION 1

What we are

Operators don't understand their own games. Five fields from a supplier sheet, a wall of identical tiles, a lobby that treats a new player like a returning one. Every expensive problem downstream — acquisition, churn, generic ads — starts there.

We fixed the root problem at a scale nobody else has attempted: 500+ structured fields per game, media we generate ourselves, all encoded into a casino-specific 500-dimension embedding model. We don't sell the data. We sell what it does.

Three options for the why.

OPTION A · RECOMMENDED

"We know casino games better than anyone. We sell what that knowledge does."

Plain, outcome-led, survives being said to someone outside the industry.

OPTION B

"Sportradar for casino games."

Instant in-industry mental model, borrowed credibility. But it anchors us to a data-commodity image and defines us by someone else's brand.

OPTION C

"The Game DNA company. Every casino game, sequenced, and put to work."

Owns our language. Needs one beat of explanation the first time, then sticks.

SECTION 2

The model

One business, two layers. A decision, not a compromise.

TOP LAYER · NARROW AND HIGH

Outcomes

Served recommendations, personalisation, buying intelligence, essence-driven creative. Margin, differentiation and case studies live here — and value migrates upward over time.

BASE LAYER · WIDE AND CHEAP

Data

A live feed of structured game data and media. Zero marginal cost, no account management, priced as a no-brainer. Its jobs: scale, stickiness (nobody rips a feed out), and the drawbridge for every upsell.

NEVER FOR SALE

Deep intelligence

Tuned weights, the full embedding space, the engines. Internal only. The base layer is deliberately the shallow end.

SECTION 3

The ladder

Fixed vocabulary from here on. Four rungs, each making the next one obvious: nothing is crippled, everything above is simply better.

FREE	Snapshot ENTRY AND NORMALISATION Signed, one-off, limited fields, click-through terms, zero touch. Goes stale on its own — which is the design: snapshot versus subscription, never "handicapped".
CHEAP	Feed THE STICKEST THING WE SELL Licensed live subscription: metadata and media, continuously updated, every new game. The recurring fee buys freshness; non-perpetual, clear-out on exit. Packaged embedding sets sit at the top of this rung on stricter terms.
SERVICE	Served intelligence OUR ENGINE, THEIR OUTCOMES Answers through an API: cold-start personalisation, recommendations, semantic search, buying intelligence. Answers, not vectors — the models never leave our estate. No PII in the base case, no integration project.

PREMIUM

Applied outcomes

WHERE EVERYTHING COMPOUNDS

Intelligence-driven creative and delivery at zero touch. Ads built from the game's archetype so the creative carries what the game feels like, matched to launch calendars and player appetite. The CPA proof point lives here.

Rail fill = price level. Pricing here is shape only: no figures are agreed, and nothing goes external without Andrew and Brendan's sign-off.

SECTION 4

How we enter

Land with the frictionless things: the Feed, and outputs that only touch marketing surfaces — tiles into a CMS, creative, game info pages. Contracts that close in days. Buyer: CMO first, CPO second — people paid on outcomes who aren't defending a system they built.

We do not lead with the lobby or any product surface. Internal teams defend the lobby, "our data is better than yours" hands their devs a requirements list, and product surfaces move at operator speed.

Cold start is the marquee demo, not the first sale. Visceral in two minutes with zero client data — but it touches the signup journey and sits between two budget holders. It needs one leaned-in client before it appears anywhere as more than a demo.

Expansion follows credibility, not ambition: land narrow with marketing, deliver, get walked into other departments. That's the pattern that has actually worked — Hollywood and Kingmakers are ready for it now. We stop making first deals bigger than they should be.

Parked for later: suppliers and affiliates.

SECTION 5

What we protect and how

The base layer only works sold wide if the walls hold. The airlock between shallow and deep data is the whole design, enforced four ways:

- **Rate limits and batch caps.** Nobody ever sees the full catalogue at once.
- **Watermarking** on data and media, so leaks are traceable.
- **Licence terms with teeth.** Non-perpetual, no derivative datasets, no model training, clear-out on exit — enforcement we're prepared to use.
- **Staleness.** A hoovered back catalogue decays; the licence is what buys freshness.

Gap: watermarking is currently a commitment, not a mechanism. It needs a spec before the Feed sells at any scale.

Until patents file: no benchmark decks, model internals or archetype detail leave the building. Benchmarks are described as "typical operator approaches", never named competitors. James owns the cleared list.

SECTION 6 · MARK THIS UP

What we honestly don't know

Stated so we stop discovering them mid-pitch.

- 01

Demand scale.

Whether the market for our most mature outputs is 100 operators or 1,000. Good signal, no number.
- 02

True marginal cost at scale.

Playables look genuinely scalable, statics close, video isn't there yet. The Q3 metrics work is the answer; until then we don't promise unit economics we haven't measured.
- 03

Cold-start validation.

Zero deployments. One leaned-in client needed before it appears in any sales material as more than a demo.
- 04

Extraction honesty.

What a client could actually rebuild from a licensed embedding pack, and how fast. The paranoia level of the licence terms depends on the answer.

SECTION 7 · MARK THIS UP

Decisions this document forces

Named owners. Change the names, but not to nobody.

The exposure question, per product line: output, tool, or data?

The one genuinely open strategic call. It sets the wedge, the pricing shape and the portal roadmap. Working assumption: outputs and shallow data yes, tools and deep data no. Argue with that here. Group session.

RAHOUL CONVENES

The umbrella line.

Part of the rebrand, this week. Shortlist in [section 1](#).

BRENDAN

Protection mechanics spec.

JAMES

Watermarking mechanism, rate-limit and batch design, licence enforcement posture.

Cold-start validation client.

RAHOUL + ANDREW

Which leaned-in client, on what terms. ComeOn is the obvious candidate; the relationship runs through Andrew.

Feed pricing shape.

ANDREW + BRENDAN

Cheap-by-design needs a floor before any external conversation.
